

CGP Imaging Committee Policy Update

THE COALITION
FOR GOVERNMENT PROCUREMENT

Cybersecurity Maturity Model Certification 2.0

- The Cybersecurity Maturity Model Certification (CMMC) is an upcoming framework for DoD Federal contractors and subcontractors to ensure controlled unclassified information is properly protected. It is expected that the requirements for CMMC will be expanded across the Federal landscape.

- As DoD continues to work on revisions the current release is unknown, but the proposed rule was expected to come in June. However, as of May 31, the SBA has not received a copy of the proposed rule which pushes the release back.

NIST SP 800-171, Revision 3

- Currently the National Institute of Standards and Technology is accepting comments to NIST SP 800-171, Protecting Controlled Unclassified Information in Nonfederal Systems and Organizations the underlying regulation to CMMC.
- Significant changes NIST SP 800-171, Revision 3 include:
 - Updates to the security requirements and families to reflect updates in NIST SP 800-53, Revision 5 and the NIST SP 800-53B moderate control baseline
 - Updated tailoring criteria
 - Increased specificity for security requirements to remove ambiguity, improve the effectiveness of implementation, and clarify the scope of assessments
 - Introduction of organization-defined parameters (ODP) in selected security requirements to increase flexibility and help organizations better manage risk
 - A prototype CUI overlay
- Comments are due on July 14, 2023. Revisions are expected to be completed by Fourth Quarter of the calendar year.

FAS Catalog Platform

- The FAS Catalog Platform continues its pilot for companies under the Office Supplies OS4 SIN.
- The new FAS Catalog Platform (FCP) is designed to make it simpler for Multiple Award Schedule contractors to access and manage product and service details. This platform is the replacement for the Schedule Input Program.
- The FCP reduces data entry needs and improves data integrity by integrating with GSA contract writing systems. This improves GSA Advantage's catalog information for customers making purchasing decisions. The FCP includes features such as:
 - Automated business rules, data validations, and system notifications to provide contractors near-real-time feedback on submissions.
 - Automated Compliance & Pricing (C&P) Report helps contractors establish and maintain compliant and competitive catalogs.
 - Shared user interface with GSA contracting officer and Vendor Support Center (VSC) help desk support provides insight to action statuses and enables the VSC to assist users more effectively.
 - Central view for Authorized Negotiators with all catalog actions and a downloadable version of last-approved catalog makes it easier for contractors to manage catalog details.
 - Automated publishing to GSA Advantage! through integration with eMod reduces data entry for contractors and improves catalog quality for customers
- The agency anticipates onboarding additional MAS product catalog contractors starting October 2023 and will continue in phases until all vendors are using the FCP. **Contractors interested in moving to FCP should fill out [the FCP transition form](#) to provide key catalog information.**

Coalition Events

- a. MAS Hot Topics with the Gormley Group, June 13
- b. All Member Meeting with Erv Koehler, June 28
- c. Primes and Subs Small Business Committee Event, Late July
- d. Charity Golf Tournament, August 16
